Fri, 01 Jun 2018 08:39:00 GMT - We test this basic chemistry in a simple ICP setup at 50 mTorr varying the power from 100-1000 W. With our basic chemistry, both gases like typical electropositive gases as can be seen in figure 1; the electron density is a linear function of the power, whereas the electron temperature is essentially constant.

Wed, 13 Jun 2018 11:52:00 GMT - For example, the chemistry of an area with a particular signature can be compared with the chemistry that might be expected from water moving through a source area with a known rock type or seeping through a river with known surface-water chemistry. The likely source of the ground water can be determined from such comparisons.
